validation

- o Fixed external temperature (-15, 25, 55 °C)
- o 3 internal volumetric heat sources (PCBs)
- o Changed orientation
- o Inner insulation wall
- o Steady state solver with SIMPLE pressure velocity coupling, second order upwind differencing for the discretization terms.
- o Natural convection with Boussinesq approximation
- o Radiation with DOF model

Results for external temperature 25 °C

External temperature [C]	Direction of gravity	Middle insulation	Max emi temperature [C]	Max chamber temperature (1) [C]	Max chamber temperature (3) [C]
-15	x+	no	-3.3	26.0	
		yes	-6.9	-4.6	26.1
	x-	no	-7.2	26.6	
		yes	-7.4	-8.6	24.4
	z+	no	-6.2	-13.1	
		yes	-6.7	-7.2	40.5
	25	x+	35.7	61.9	
		yes	32.5	33.8	61.2
55	x-	no	32.3	62.4	
		yes	32.1	31.0	59.7
	z+	no	33.3	76.3	
		yes	32.7	32.2	72.6
	x+	no	64.9	88.8	
		yes	62.0	62.8	87.8
	x-	no	61.9	89.2	
		yes	61.7	60.7	86.2
z+		no	62.9	100.9	
		yes	62.2	61.8	96.7
